Powell's

"Louisville Lawn" Grass Seed

Makes Velvet Green Lawns Quickly. Better Than Turf or Sod.

AFTER supplying seed to the most critical users of grass seed for many years, we are happy to know that LOUISVILLE LAWN GRASS SEED has been used in producing permanent lawns about homes which are pointed to as show places. The seed used in this mixture is selected for purity and viability, free from chaff or other filler.

Although this mixture contains nearly 50 per cent of Kentucky Blue Grass, we advise its use rather than pure Blue Grass for starting a new lawn or renovating an old one. Kentucky Blue is our best lawn grass, but is very slow in becoming established, requiring two or three years from seed. The other grasses in this mixture produce immediate results and act as a nurse crop to the Blue Grass seedlings, providing shade in summer and protection from winter-killing. Contains a liberal sprinkling of White Dutch Clover.

FOR NEW LAWNS. The soil should be well prepared and Bone Meal or Sheep Manure should be well incorporated with the soil. Seed should be sown at the rate of 1 pound for every 300 square feet, selecting a time when there is no wind. After sowing, roll or rake lightly.

FOR OLD LAWNS. Bare spots should be vigorously roughed with a steel rake. An application of SHEEP MANURE will act as a stimulant to patches lacking plant food. Scatter the seed as evenly as possible, then rake or roll lightly.

SEVERAL SOWINGS are better than one. Do not risk all your seed at one time. The seed may be washed away by a downpour of rain immediately after planting. A good plan is to sow a part of your seed walking East and West—the next time walk North and South, in this way assuring an even distribution. Very good success can be had from scattering seed on a soft snow. In balmy spring weather it is well to rake out all dead grass before sowing.

USE GRASS SEED GENEROUSLY. Where lawns are kept in neat condition, the plants do not produce seed as Nature intended. This deficiency must be supplied by an occasional seeding by hand.

Prices:—1 lb. 40c; 5 lbs. \$1.90; 10 lbs. \$3.50.

Shade Grass Mixture

For use in courts, under trees and shady places we have produced a mixture of SHADE-LOVING GRASSES which will give good results where other grasses fail. When the grass has become established, water freely at least once a week and give an application of sheep manure and bone meal at least twice a year, using two pounds of bone meal or five pounds of sheep manure to each 100 square feet.

PRICES: 1 lb., 50c; 5 lbs., \$2.40; 10 lbs., \$4.50.

**Wizard Makes Beautiful
Lawns and Gardens.**

Wizard is a concentrated weedless manure that puts new life and beauty in lawns and gardens. Everybody can get wonderful results with this natural fertilizer because it is easy to use and does not burn plants. You can make your lawn and garden the envy of the neighborhood if you will feed your plants with Wizard Sheep Manure.

FOR LAWNS. Wizard produces thick, velvety, green lawns of lasting beauty. It supplies the humus and natural plant food so necessary to feed the millions of grass plants that make up a thick, green turf. On new lawns apply 10-lbs. to 100 sq. ft. and rake into the surface soil. On old lawns rake thoroughly and then broadcast 6 to 10-lbs. per 100 sq. ft. Scatter Wizard just as you would sow seed.

FLOWER GARDENS—SHRUBBERY. Wizard promotes luxuriant green foliage and a wealth of vivid colored flowers. It is the safest and best plant food for flowers, shrubbery, vines and trees. Mix a handful with the soil under each new plant and on established plants 10-lbs. to 100 sq. ft. raked into the surface soil. Use more for shrubs, vines and trees. Liquid manure used once a week will prolong the blooming season.

VEGETABLES AND FRUITS. Every practical gardener knows that there is nothing better than manure to build up the soil and produce big profitable crops. Wizard is the best manure in a highly concentrated form. It produces big crops of crisp, tender vegetables in time for the early market. A practical fertilizer for every grower. Use 1000 to 1500-lbs. per acre.

FLORISTS. Wizard has been the old reliable fertilizer for the under glass grower for over twenty-one years. It is safe and dependable for all crops grown under glass.

Hardy Perennial Plants

Chrysanthemum

What is more beautiful than a well-planted border of hardy plants? With colors so varied that any scheme may be worked out, the average gardener may have flowers which once established, need little or no attention from one year to another. Naturally, they will respond to good treatment and the true flower-lover will study their habits and needs so as to better supply such cultivation, fertilizing, pruning or mulching which they may need.

Most of the perennials may be planted either in spring or fall. When planted early in the spring they will bloom the first year, and will continue to bloom for many seasons with very little care. In arranging

AT PLANTING TIME—5 pounds Raw Bone Meal, 1 pound Muriate of Potash and 5 pounds of Wizard Sheep Manure. Mix thoroughly and apply at the rate of 1 pound to each hill working the fertilizer well into the soil. No fertilizer should come in direct contact with tubers.

AUGUST TOP DRESSING—1½ pounds Bone Meal (preferably steamed bone as it is quicker in acting), 4 pounds Wizard Sheep Manure and ½ pound Muriate of Potash. Mix and then scatter around plants, keeping at least 8 inches away from stalk. Cultivate top soil continually but not deeply. Water thoroughly and frequently.

Gladiolus Bulbs

For cut flowers from your own garden, plant Gladiolus bulbs, a few at a time until the middle of June. You will be rewarded with a continuous supply of gorgeous blooms for the table. Tulips and Hyacinths are grown for us by very reliable growers in Holland and after harvesting and drying are rushed across the ocean to reach you in time for fall planting.

THE BEST VARIETIES ARE QUICKLY BOUGHT UP by waiting customers and late in the season it is almost impossible to obtain the choicest sorts.

PLACE YOUR ORDER NOW—Or, if you prefer, make your selections at blooming time and place your list in our hands not later than June first. When our shipments arrive, your bulbs will be counted and delivered to you. Exactly the bulbs you want with no delay or disappointment and at $\frac{1}{4}$ less than the regular price.

No Advance Payment Is Required

WHY THIS OFFER? Every season our supply of certain varieties is exhausted long before planting time is over. In an effort to supply the needs of our customers we must then buy from Eastern importers and jobbers who charge us much higher prices than those originally paid the growers. Express is then added to the cost which must be passed on to the consumer. We are glad to share with our customers the benefits of EARLY ORDERS.
